DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 5, "velcro" is a trademark that must be changed to read -- hook and loop or hook and pile --.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Moore '467.

Moore discloses in figures 1-7 an orthopedic splint comprising a covering section 12, stabilizing sticks 52, a padding 42 for the calf and component parts (one section is on one side of 52 and the other section is the center of the cover, in figure 4)..

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Moore '467 in view of Wang.

Moore discloses in figures 1-7 an orthopedic splint, substantially as claimed. However, Moore does not disclose a velcro fastener used to fasten the pad inside of the covering. Wang teaches in figure 5 an orthopedic splint comprising a pad 43 that is attached to the inside of the splint by a velcro fastener 46. It would have been obvious to one having ordinary skill in the art at the time that the invention was made that the velcro as taught by Wang could be substituted for the adhesive as disclosed by Moore because both fasteners are functionally equivalent.

Allowable Subject Matter

6. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3764

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kurth discloses an orthopedic splint. Although this reference discloses structural limitations recited in the claims, it was not used to reject any claims, in the first office action.
